■ 유의 사항

○ 이 문제지는 첨부된 **2026학년도 고3 9월 모의고사 손필기 분석지(18~45번)**의 지문 주제를 바탕으로, 듣기 문항을 제외하고 독해 28문항만으로 재구성한 학습용 모의평가입니다.
○ 문항 수는 28문항이며, 배점은 실제 수능과 동일하게 2점 21문항 · 3점 7문항으로 차등 배점하였습니다(총 63점).
○ 모든 문항은 5지 선다형입니다. 답안은 답안지의 해당란에 표기하시오.
○ 지문은 실제 외국 기사·저널 및 저작의 논지를 수능 지문 수준으로 재서술한 것이며, 원문을 그대로 인용하지 않았습니다.
○ 문항의 지시문은 실제 수능과 같이 한국어로, 지문과 선택지는 영어로 제시하였습니다.
○ 문항 유형·배점·지면 구성(2단 편집, 문항 번호 상자, 선택지 ①~⑤)은 실제 수능 영어 영역 문제지의 형식을 따랐습니다.

■ 문항 구성

번호	문항 유형	배점	번호	문항 유형	배점
18	글의 목적	2점	32	빈칸 추론	3점
19	심경 변화	2점	33	빈칸 추론	2점
20	필자의 주장	2점	34	빈칸 추론	3점
21	함축적 의미	2점	35	무관한 문장	2점
22	글의 요지	2점	36	글의 순서	2점
23	글의 주제	2점	37	글의 순서	3점
24	글의 제목	3점	38	문장 삽입	2점
25	도표 정보 파악	2점	39	문장 삽입	3점
26	내용 일치(설명문)	2점	40	문단 요약	2점
27	내용 일치(실용문)	2점	41	장문: 제목	3점
28	내용 일치(실용문)	2점	42	장문: 어휘	2점
29	어법 정확성	2점	43	장문: 순서	2점
30	어휘 적절성	3점	44	장문: 지칭 추론	2점
31	빈칸 추론	2점	45	장문: 내용 일치	2점

■ 지문 출처

각 문항의 원출처(실제 외국 기사·저널·저작)와 EBS 수능특강·수능완성 대응 유형은 **해설지 1쪽 '지문 출처 및 EBS 연계 분석'**에 문항별로 정리되어 있습니다.

18 다음 글의 목적을 고르시오.

Dear Mr. Callahan,
I am writing to thank you for inviting me to speak at the sixtieth graduation ceremony of Ridgemont High School and to explain why I must respectfully decline.

As a member of the class of 1994, I have watched with pride as our school has grown into one of the most respected institutions in this district, and I was genuinely honored when your office contacted me about addressing this year's graduates. Unfortunately, a long-scheduled field assignment will keep me overseas throughout the week of the ceremony, so I will not be able to return in time to join you. It is disappointing to miss a moment that means so much to the students and their families, especially since I owe much of who I am to the teachers who once stood at that same podium. I have asked my former classmate Daniel Reyes, who now runs a small engineering firm in the city, whether he might be willing to take my place, and he has kindly agreed to do so.

I hope you will consider him as a speaker for the occasion. Please accept my warmest congratulations to the graduating class and my sincere wish that the ceremony will be a memorable one.

Sincerely,
Alice Bennett

① to congratulate a school on winning a national award
② to request information about a school reunion
③ to recommend a teacher for an alumni award
④ to decline an invitation to give a graduation speech
⑤ to express thanks for a donation to the school

19 주어진 글에서 Ella의 심경 변화로 가장 적절한 것은?

Ella stood at the gate of the schoolyard, holding the strap of her bag with both hands. She and Jisoo had argued the previous afternoon over something so small that she could no longer remember what had started it. All night she had replayed the last words she had thrown at her friend, and each replay made her stomach tighten. "Maybe she doesn't want to see me at all," she thought as she walked slowly toward the classroom. The hallway felt longer than usual, and every laugh from the open doors seemed aimed at her. When she pushed the door open, Jisoo was already there, standing beside her desk with an apologetic smile. "I was awful yesterday," Jisoo said quietly. "Can we start over?" For a second Ella could not speak; then the weight in her chest simply dissolved, and she heard herself laughing. "You were awful," she said. "So was I." They sat down together, and the ordinary noise of the classroom came back to her as something warm.

① excited → bored
② confident → ashamed
③ anxious → relieved
④ angry → indifferent
⑤ lonely → guilty

20 다음 글에서 필자가 주장하는 바로 가장 적절한 것은?

Every few years the tools a worker depends on are replaced by versions that demand unfamiliar skills, and the people who adapt fastest are rarely those who learned the most in school. What separates them is the habit of learning afterward. Yet most companies still treat training as an expense to be cut when budgets tighten, and most workers treat study as something that ended with a diploma. This arrangement is no longer sustainable. If adaptability is now the core of employability, then opportunities to learn must be built into the structure of work itself: paid hours set aside for study, clear paths from one skill to the next, and managers who are rewarded for developing people rather than for keeping them in place. Individuals cannot be asked to carry alone a responsibility that depends on time, money and access. Companies and governments must design the conditions in which continuous learning is possible. Only then will lifelong education become a reality rather than a slogan.

① Companies should provide paid time and support for continuous learning.
② Workers should choose careers that match the skills they already have.
③ Schools should teach practical skills instead of academic subjects.
④ Governments should lower the cost of university education.
⑤ Training programs should be judged by their short-term profits.

21 밑줄 친 the search box is less a window than a mirror가 다음 글에서 의미하는 바로 가장 적절한 것은?

Type three letters into the search box of almost any platform, and a list of suggestions appears before you have finished your thought. These suggestions feel like a helpful shortcut, but they are produced by counting what millions of other users have typed before. Because the ranking rewards frequency, the phrases that appear most often rise to the top, and those phrases carry the assumptions of the people who typed them. When users search for a nationality and the first suggestion completes it with a stereotype, the algorithm has not invented the prejudice; it has simply made it easier to repeat. The same mechanism shapes what we believe other people are looking for, and thus what we assume is normal to ask. Seen this way, the search box is less a window than a mirror. It does not show us the world as it is; it shows us a statistical portrait of ourselves, offered back with the authority of a machine.

① It presents objective facts about the world more clearly than before.
② It mainly reflects the collective habits and assumptions of its users.
③ It encourages users to question the beliefs they already hold.
④ It protects users by hiding the personal data they have entered.
⑤ It becomes more accurate as more people use the same platform.

22 다음 글의 요지로 가장 적절한 것은?

Walk into a lecture hall a few minutes late and you will probably take the first empty seat you find, usually near the back. That small decision is less innocent than it looks. Studies of classroom ecology have repeatedly found that students in the front and center of a room ask more questions, make more eye contact with the speaker and report stronger attention than those at the edges and rear — and the difference appears even when the same students are randomly assigned to seats. The effect is partly physical: faces and voices arrive more clearly from close range. It is also social: a seat in the middle of a row makes it awkward to leave, so attention has fewer exits. None of this means that quiet students are uninterested or that back rows are a sign of laziness. It means that a room teaches something before the instructor speaks, and what it teaches is where you belong in the conversation.

① A speaker's voice and gestures matter more than the content of a lecture.
② Small classes produce better learning outcomes than large ones.
③ Latecomers should avoid entering a lecture hall during a presentation.
④ Where an audience sits strongly influences how much it takes part and remembers.
⑤ Quiet students should be encouraged to sit in the front row.

23 다음 글의 주제로 가장 적절한 것은?

Ask someone what dopamine does and you will hear that it is the molecule of pleasure — the chemical that rewards us for eating, scrolling, winning. That description is only half true, and the missing half is the more interesting one. In experiments where animals learn to expect a reward, dopamine neurons fire most strongly not when the reward arrives but when the cue that predicts it appears. Once the reward becomes certain, the response fades. What the system seems to encode is not satisfaction but the distance between where we are and where we might be: the possibility of something better. This is why effort itself can feel charged with meaning, and why the pursuit often outlasts the pleasure. Dopamine is less a prize for finishing than a signal that there is more to reach for — a mechanism for keeping us in motion toward a future we can imagine.

① the difference between short-term and long-term rewards
② the harmful effects of excessive dopamine on decision making
③ the role of dopamine in sustaining anticipation and effort
④ how repeated rewards create lasting habits
⑤ why people prefer immediate rewards to delayed ones

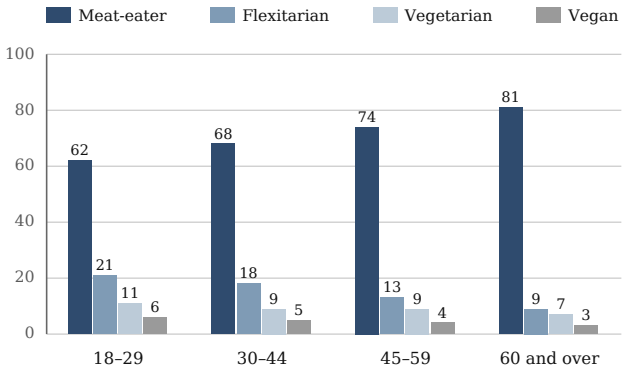

24 [3점] 다음 글의 제목으로 가장 적절한 것은?

Not long ago, the stages of a life were arranged like a staircase: school, then work, then retirement, each step at a predictable age. That staircase is being dismantled. People begin degrees in their fifties, change careers in their sixties, and return to work after they have officially retired; at the other end, teenagers earn money from platforms that did not exist when their parents were young. Institutions have begun to follow: universities market lifelong programs, employers remove age limits from application forms, and some countries are redesigning pensions around flexible transitions rather than a single date. The change is not only economic. When age stops predicting what someone is doing, the assumptions we make about strangers weaken, and with them the small exclusions that once seemed natural. A society organized around stages is being replaced by one organized around transitions, and the result is less a cult of youth than the quiet end of an old hierarchy.

① Why Retirement Ages Should Be Raised
② The End of the Staircase: Life Beyond Age Stages
③ Lifelong Learning and the Modern University
④ Teenagers and the New Platform Economy
⑤ How Pensions Shape Economic Growth

Dietary choices of respondents in the United Kingdom by age group (%)

* Figures may not add up to exactly 100% due to rounding.

① Meat-eaters make up the largest share of respondents in every age group.
② Vegetarians outnumber flexitarians in all four age groups.
③ The share of vegans is highest among respondents aged 30–44.
④ Respondents aged 60 and over are the most likely to be flexitarian.
⑤ Meat-eaters account for less than half of respondents in every age group.

Few artists did more to shape the language of American animation than Chuck Jones, who was born in Spokane, Washington, in 1912 and grew up in California. His father, an amateur inventor, encouraged him to draw and to read, and a childhood job at a studio's loading dock gave him his first look at how cartoons were made. Jones joined Warner Bros. in 1933 as an assistant animator and spent three decades there, where he helped develop Bugs Bunny and Daffy Duck and created the Road Runner and Wile E. Coyote — a pair whose endless chase he described as a study of obsession. He insisted that his characters behave like real animals, timing their movements to what a rabbit or a coyote would actually do and letting the comedy grow out of that logic. His 1957 short What's Opera, Doc?, which sets a Wagner opera in a cartoon desert, is often ranked among the finest animated films ever made, and he won three Academy Awards over his career. After leaving Warner Bros., he founded his own studio and directed adaptations of children's stories, and in 1989 he published an autobiography that became a standard text for young animators.

① He was born in Spokane, Washington, in 1912.
② He started at Warner Bros. as an assistant animator.
③ He made his characters behave in animal-like ways.
④ He won three Academy Awards during his career.
⑤ He founded his own studio before joining Warner Bros.

RCQ High School Food Waste Reduction Competition

October 1 – October 31 · Open to all classes

RCQ High School has run this competition every year since 2023 to encourage sustainable habits in the cafeteria and beyond. For one month, the leftover food from each class's lunch tray is weighed at the end of the lunch period and recorded on the chart in the cafeteria. The class that reduces its average waste the most compared with September will be named the Waste-Free Class and will receive a one-day trip to Greenfield Farm in November.

- Workshop: 'Cooking with Leftovers' — October 15, 4 p.m., Home Economics Room
- Weekly results are posted every Friday on the cafeteria board.
- Sign up your class in Room 204 by September 26.
- Questions: Ms. Han (hanscience@rcq.hs.kr)

① The competition lasts for one month.
② The leftover food of each class is weighed after lunch.
③ A cooking workshop is held during the competition.
④ The winning class goes on a one-day farm trip.
⑤ Classes must sign up on the first day of the competition.

Newstar Voice Acting Course

4 weeks · Thursdays, 7:00–9:00 p.m. · Newstar Media Studio

Have you ever wondered how a single voice can become a dragon, a grandmother and a nervous pilot in the same scene? This four-week course is designed for anyone who wants to find out — no previous experience is required. Each session focuses on one skill: breathing and articulation in Week 1, creating character voices in Week 2, dubbing scenes from animation and film in Week 3, and recording a demo reel in Week 4.

- Instructor: J. Park, voice actor for 20 years in animation and audio books
- Benefit: every participant receives a copy of the class demo reel
- Students with a valid school ID pay 20% less.
- Fee: 240,000 won · Register online by October 30 (12 seats only)

① The course runs for four weeks.
② The classes are held in the evening.
③ Participants attend classes twice a week.
④ Students can pay a reduced fee with a school ID.
⑤ Participants record a demo reel during the course.

Managers who listen well are often called "nice," as though empathy were a pleasant extra rather than a professional skill. Research on retention tells a different story. People rarely leave an organization over pay alone; they leave when they feel that no one in it ③ understanding what their work costs them. A leader who asks questions and ① acts on the answers signals that a problem is ② worth solving, and that signal is what keeps talented people from quietly looking elsewhere. Empathy is not the same as agreement. It is the discipline of seeing another person's situation clearly enough to notice what they are up against, and teams ④ that practise it systematically report lower turnover than teams that depend on individual talent. In short, ⑤ what leaders pay attention to determines who stays.

30 [3점] **다음 글의 밑줄 친 ①~⑤ 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?**

A healthy garden is not a garden without insects; it is a garden where no single species can dominate. Gardeners who reach for a spray at the first sign of aphids often ① discover that the problem returns within weeks, because the treatment has also removed the ladybirds and lacewing larvae that were keeping the aphids in check. A more patient approach is to plant herbs such as dill, fennel and coriander among vegetables. Their small flowers supply nectar and shelter for predatory insects, which then ② remain in the garden long enough to breed. Some herbs also ③ confuse pests with strong scents that mask the smell of the crop they are seeking, while deep-rooted kinds such as comfrey draw nutrients from lower soil layers and return them as their leaves decompose. None of this produces an instant result, and the first season may look untidy. Yet a garden that has been allowed to ④ assemble its own community of insects needs less intervention each year, and the balance it reaches is far more ⑤ fragile than anything a spray can achieve.

31 **다음 빈칸에 들어갈 말로 가장 적절한 것은?**

Stand up to speak and your body responds as though a predator had appeared: your heart races, your mouth dries, your hands tremble. This reaction is puzzling until you consider what was at stake for our ancestors. In a small group, being watched closely by many pairs of eyes was a test of standing, and losing that test could mean exclusion from the group — which, over most of human history, was close to a death sentence. The modern audience is harmless, but the response is triggered by the same cue: many eyes, all directed at you. This is why the fear rarely appears when you speak to a single friend and almost always appears before a room of strangers, and why the physical symptoms are so hard to talk yourself out of. Your body is not evaluating your presentation skills. It is answering an ancient question about whether the group will keep you, and it is in no hurry to be persuaded otherwise. The fear, in other words, is not a verdict on your ability but _____.

① a memory of a time when the group’s judgment decided whether you belonged
② a sign that your preparation for the speech was insufficient
③ a habit that can be removed simply by avoiding large audiences
④ proof that modern audiences are more critical than ancient ones
⑤ evidence that public speaking skills cannot be improved

32 [3점] **다음 빈칸에 들어갈 말로 가장 적절한 것은?**

The world you perceive is not a faithful recording of what reaches your senses. When you turn your head, the visual scene slides across your retina, yet the room appears stable; when you speak, the sound of your own voice seems quieter than a recording of it. In both cases the brain has predicted the sensory consequences of its own actions and subtracted them, a process known as sensory attenuation. The purpose of this subtraction becomes clear when it fails. Patients who cannot suppress the sensation of their own touch report that they feel as though someone else were touching them, and people asked to tickle themselves find the sensation oddly weak. What the system is doing, in effect, is treating the self as background and the rest of the world as news. A stimulus that the brain has not predicted carries information about something it may need to respond to, so it is given priority; a stimulus the brain has itself produced carries no such information. This is why a single unexpected sound in a quiet house can wake you while the familiar hum of a refrigerator never does. Our senses are tuned, in other words, not to detect the most energy but _____.

① to record every detail of the environment with equal accuracy
② to separate vision from hearing during movement
③ to keep the body from responding to familiar signals
④ to give the greatest weight to what the self has not caused
⑤ to reduce the amount of information reaching the brain

33 **다음 빈칸에 들어갈 말로 가장 적절한 것은?**

Readers can follow a character through a described house only if the description gives them something to move along. Lists of furniture, however precise, tend to dissolve into a blur; a corridor that the character walks down, a door she has to open, a stair that creaks under her foot — these stay in memory because the reader’s own sense of direction is engaged. Writers who understand this rarely describe a room from a fixed point. They attach the details to the body that is passing through it, so that the space is revealed at the pace of a person’s movement rather than at the pace of an architect’s plan. The technique does more than make a scene vivid. It also controls information: a reader who is walking with the character sees the far end of the gallery only when the character does, and the delay itself can produce suspense. Novelists who ignore this rule often complain that their settings feel flat, when the problem is not the amount of detail but _____.

① the absence of a body to organize that detail
② the use of too many unfamiliar architectural terms
③ the lack of conversations between the characters
④ the choice of an unreliable narrator
⑤ the failure to provide a map of the setting

34 [3점] **다음 빈칸에 들어갈 말로 가장 적절한 것은?**

A joke works like a small trap. The setup invites the listener to walk in one direction, building an expectation about where the story will end; the punchline then closes a different door, and the surprise is the sound of the trap shutting. Comedians speak of this gap between setup and punchline as the distance the audience must jump. If the distance is too short, the listener has already arrived and feels nothing; if it is too long, the joke collapses into confusion, because the audience cannot see how the two ends connect. The skill lies in judging that distance for a particular room on a particular night. The same line that brings a gasp of delight from one audience will pass unnoticed in another, and no amount of rehearsal can settle the question in advance. What makes a joke land, then, is not simply the cleverness of the punchline but _____.

① the speaker's ability to keep the story short
② the seriousness of the subject that is being mocked
③ the number of times the audience has heard the joke before
④ the precise calibration of surprise for a particular audience
⑤ the willingness of the audience to laugh at itself

35 **다음 글에서 전체 흐름과 관계없는 문장은?**

Tourists do not consume a culture evenly. They arrive with limited time and a strong wish to return home with something worth reporting, and these conditions push them toward the same few places. ① A city may contain hundreds of markets, but the one printed in every guidebook absorbs most visitors, while the others continue their ordinary life a few streets away. ② Because a tourist's judgment of a trip depends on a few memorable moments, the assets most likely to be chosen are those that can be seen quickly and described in a single sentence. ③ This is why the "must-see" list tends to shrink rather than grow as a destination becomes more popular. ④ Local governments, aware of this pattern, often spend their restoration budgets on the same handful of monuments, which increases the concentration still further. ⑤ Many of these monuments were built with stone quarried within a few kilometres, and their surfaces now show centuries of weathering. The result is a curious paradox: the more a place is visited, the narrower the version of it that visitors actually see.

36 **주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?**

Every organization has an official story about what it values, and a separate story, written into its rewards, about what it actually wants.

(A)
The gap is rarely a matter of hypocrisy.
Managers seldom design a reward system to contradict their stated values; they simply measure what is easy to measure, and the measures slowly drift away from the message.

(B)
The remedy begins with a dull question asked often: what behavior did we actually pay for last month?
Once that question has an honest answer, either the rewards or the story can be changed, and the two can be made to agree.

(C)
When the two stories disagree, employees learn very quickly which one to believe.
A company may announce that teamwork matters while promoting only the individuals who exceed their sales targets; the announcement is forgotten within a quarter, but the promotion is remembered for years.

① (A)-(B)-(C)
② (A)-(C)-(B)
③ (B)-(A)-(C)
④ (C)-(A)-(B)
⑤ (C)-(B)-(A)

37 [3점] **주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?**

Farmed Atlantic salmon are, in a sense, a species that humans have rebuilt in less than two generations.

(A)
The breeders' method was straightforward: cross fish from rivers with different conditions, keep the offspring that grew fastest and matured earliest, and repeat.
Because a single female can produce thousands of eggs, selection could operate on an enormous scale, and the population changed faster than almost any other farmed animal.

(B)
The starting point was the wild.
Eggs were taken from many separate populations so that the new stock would combine traits no single river could offer — early maturity from one, tolerance of cold water from another.

(C)
The result is a fish that would struggle in the wild: its growth is rapid, its behavior less cautious, and its genetic makeup clearly distinct from that of its ancestors.
Changes that took centuries in cattle took only decades here.

① (A)-(B)-(C)
② (B)-(A)-(C)
③ (B)-(C)-(A)

④ (C)-(A)-(B)
⑤ (C)-(B)-(A)

38 **글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은?**

> A single afternoon of counting birds in a park seems trivial, but multiplied across thousands of volunteers it becomes a data set no research team could afford to assemble.

Scientific knowledge was once produced in a small number of institutions by people trained within them. ① That model has not disappeared, but it no longer describes the whole picture. Projects now invite the public to record the arrival of migratory birds, classify images of distant galaxies and measure rainfall in their own gardens, and the resulting databases are cited in peer-reviewed papers. ② The technology that made this possible is ordinary: a phone with a camera, a location signal and an internet connection. ③ What matters is not the sophistication of the instrument but the number of people holding it. ④ Observations that would once have been lost now arrive continuously from places no scientist would ever visit. ⑤ Where the older model concentrated authority, the newer one distributes the work while keeping the standards of evidence intact.

39 [3점] **글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은?**

> A chord progression that repeats without variation soon stops being heard as music and starts being heard as furniture.

Composers work with a resource they cannot increase: the listener’s attention. ① It is a resource that runs down. Within a few minutes the ear begins to treat any repeated pattern as background, and once that happens the pattern can no longer carry the piece. ② This is why almost every tradition develops devices for renewing attention — a change of key, an unexpected rhythm, a note held too long. ③ The devices themselves are cheap; what is expensive is knowing when to use them. ④ Play the surprise too early and the listener has nothing to compare it with; too late and attention has already left the room. ⑤ Because the same phrase that startles one audience may pass unnoticed in another, composers spend much of their craft on timing rather than on ideas.

40 **다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?**

Early stage lighting had one job: to make the actors visible. Gas and then electric lamps were installed to push back the dark, and the design question was simply how much light was needed and from where. The arrival of dimmers and focused instruments changed the question without immediately changing the habit, and for decades stages were lit brightly from the front, as though a photograph were being taken. Practitioners gradually noticed that a brightly lit stage shows everything and therefore emphasizes nothing: the audience’s eye has no reason to go anywhere. Modern lighting design begins from the opposite assumption. A designer decides what the audience should be able to see at each moment and then removes light from everything else, so that a face, a hand or an empty chair can carry the scene. Darkness becomes a material rather than a failure, and visibility becomes a choice rather than a default.

> Early stage lighting aimed simply at making performers (A)_____, whereas modern design uses light and darkness to (B)_____.
> Summary

① visible …… guide what the audience notices
② colorful …… shorten the length of rehearsals
③ natural …… reveal the architecture of the theatre
④ economical …… reduce the cost of lighting equipment
⑤ dramatic …… separate the stage from the audience

41 [3점] **다음 글의 제목으로 가장 적절한 것은?**

In a classic study of consumer response, the researcher Maloney noticed something that has puzzled advertisers ever since. When people ① encounter a claim that goes far beyond what they expect a product to do — a cream that erases a decade, a battery that runs for a week — they do not simply reject it. They experience a mixture of disbelief and curiosity, and it is often the curiosity that wins. The disbelief ② registers the gap between the claim and the person's existing beliefs; the curiosity is the pull to close it. Together they produce what might be called curious nonbelief: a state in which the consumer wants to find out whether the claim is true, for the pleasure of knowing rather than for the product's promised benefit. In one experiment, shoppers were shown advertisements for a new snack with claims of varying boldness. Those who found the claims moderately exaggerated were far more likely to accept a free sample than those who found them entirely believable or entirely absurd. The entirely believable group had nothing to ③ resolve; the entirely absurd group had already concluded that no information could ④ rescue the claim. Only the middle group had a question that a trial could answer. This finding has an uncomfortable implication for marketers. Perfect persuasion may be less effective than a well-placed doubt, because a settled belief is a closed question, while a doubt is an open one, and open questions ⑤ refuse to be answered. The practical lesson is not to exaggerate wildly but to leave the audience with something specific to check — a claim bold enough to be surprising and concrete enough to be testable.

① Why Exaggerated Ads Sometimes Work Better Than They Should
② The Dangers of False Advertising for Small Brands
③ How Consumers Choose Between Competing Products
④ The Psychology of Brand Loyalty
⑤ Why Free Samples Increase Short-Term Sales

42 **밑줄 친 ①~⑤ 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?**

① encounter
② registers
③ resolve
④ rescue
⑤ refuse

[43~45] 다음 글을 읽고 물음에 답하시오.

43 **주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?**

When my sister asked me to look after her dog for three months, I imagined long walks in the park and a grateful animal asleep at my feet. The reality arrived on the first morning, at six o'clock, in the form of a large wet nose pressed against my cheek.

(A)

For the first two weeks the walks were a duty I performed badly.

I chose the shortest route, kept my headphones in and counted the minutes until we could go home.

Buster, for (a)his part, stopped at every tree as though it contained a message addressed to him, and I pulled (b)him along, apologizing to strangers for the delay.

What I did not notice, in my hurry, was that the same neighbours passed us at the same hour every day.

(B)

Buster, meanwhile, had stopped pulling.

(d)He had learned the route and trotted beside me with the air of a colleague who had agreed to walk at my pace.

I began to take the longer way without deciding to, and to leave the headphones at home.

When my sister called to ask whether I wanted to keep (e)him for another month, I said yes before (c)she had finished the sentence.

(C)

The change began with a broken umbrella.

On a rainy Tuesday I forgot to charge my phone, and with nothing to listen to I started saying good morning to the people we met.

A woman with a pram told me which of the two paths stayed dry; a boy on a bicycle asked whether Buster was a rescue, and I discovered that I did not know the answer.

By the end of the walk I had had four conversations, none longer than a minute, and the morning no longer felt like something to be survived.

(D)

The dog I had agreed to look after turned out to be a device for making me leave the house, speak to strangers and notice a street I had lived on for six years.

I still do not know whether Buster was a rescue.

I have decided that the question is less interesting than the walks.

45 **윗글의 내용과 일치하지 않는 것은?**

① The narrator agreed to care for Buster for three months.
② At first the narrator took the shortest route and kept headphones on.
③ The narrator passed the same neighbours at the same hour each day.
④ During the rainy walk, the narrator had several short conversations.
⑤ The narrator learned from a boy that Buster was a rescue dog.
